

# TIERNAN EVANS

tiernanevans.com tiernan.evans@gmail.com

## CURRENT POSITION

---

### Ellison Institute of Technology, Oxford

Jul 2025 – Present

Postdoctoral Researcher - Economics

- Contributed to research projects in the health and ageing research agenda
- Presented Economics team research agenda to other research groups and Scholars at EIT
- Developed QA policy for economics work

## EDUCATION

---

### London School of Economics

PhD, Economics

2020 – 2025

MRes, Economics (Distinction)

2018 – 2020

MSc, Economics (Distinction)

2016 – 2018

### University of Illinois Urbana-Champaign

BS, Actuarial Science (Highest Distinction); BS, Economics

2008 – 2011

## RESEARCH INTERESTS

---

Labour Economics; Human Capital; Health Economics; Applied Microeconomics

## WORKING PAPERS

---

### Local Labour Markets and Skill Acquisition

2024

*Abstract:* Educational attainment varies widely and persistently across England. I combine establishment-level administrative data on local labour market demand, with individual-level education choice data to document the spatial variation of skill demand, identify the role that existing differences in skill demand play in educational attainment, and derive an elasticity of the supply of skills to local skill demand. The responsiveness of education to skill demand has implications for labour market adjustments to economic shocks, the persistence of local economic outcomes, and the effectiveness of local economic policies.

### Individual Consequences of Occupational Decline

August 2023

*Economic Journal* with Per-Anders Edin, Georg Graetz, Sofia Hernnäs and Guy Michaels.

*Abstract:* We assess the career earnings losses that individual Swedish workers suffered when their occupations' employment declined. High-quality data allow us to overcome sorting into declining occupations on various attributes, including cognitive and non-cognitive skills. Our estimates show that occupational decline reduced mean cumulative earnings from 1986–2013 by no more than 2%–5%. This loss reflects a combination of reduced earnings conditional on employment, reduced years of employment and increased time spent in unemployment and retraining. While on average workers successfully mitigated their losses, those initially at the bottom of their occupations' earnings distributions lost up to 8%–11%.

## WORK IN PROGRESS

---

### On the Definition and Measurement of Ageing

with Julian Ashwin, Siavesh Mohades and Andrew Scott

*Abstract:* As life expectancy rises and ageing becomes central across multiple disciplines, this paper clarifies what qualifies as an “ageing variable” and why. We propose a definition that can guide academic and policy debates and apply it to evaluate whether existing measures genuinely capture ageing.

## Familial Persistence of Geographic Mobility

*Abstract:* The early post-war era in the United States was a time of high geographic mobility, both in the short- and long-run migration. Since then, migration rates in the US have stagnated or fallen. I use PSID data to track families over time and shed light on the generational dynamics of migration. I document the characteristics of geographic mobility and find persistence across generations. I find preliminary evidence suggesting heterogeneity across families is not explained by observables. Children born in a different state than at least one of their parents are ~30% more likely to migrate than those born in the same state as both parents.

## TEACHING EXPERIENCE
